

Case Study - Transportation

Automatic Vehicle Locating System (AVLS)

Bluvalue, client from UAE, wanted to know the fuel consumption of each vehicle without implementing any fuel sensor w.r.t to daily running of vehicle. Our AVLS helped them to achieve the above result with 95% accuracy.

Client had provided the approximate mileage of all vehicle.

The data received from Vehicle tracking unit were used to calculate the daily running of vehicle with help of mileage data fuel consumption as calculated in Mileage report.

We studied the fuel consumed data log from mileage report for one month and we were able to conclude fuel consumption with 95% accuracy.
